

Predicting Cardiovascular Disease

Module 5 Project
By Desmond Webb

Project Scope

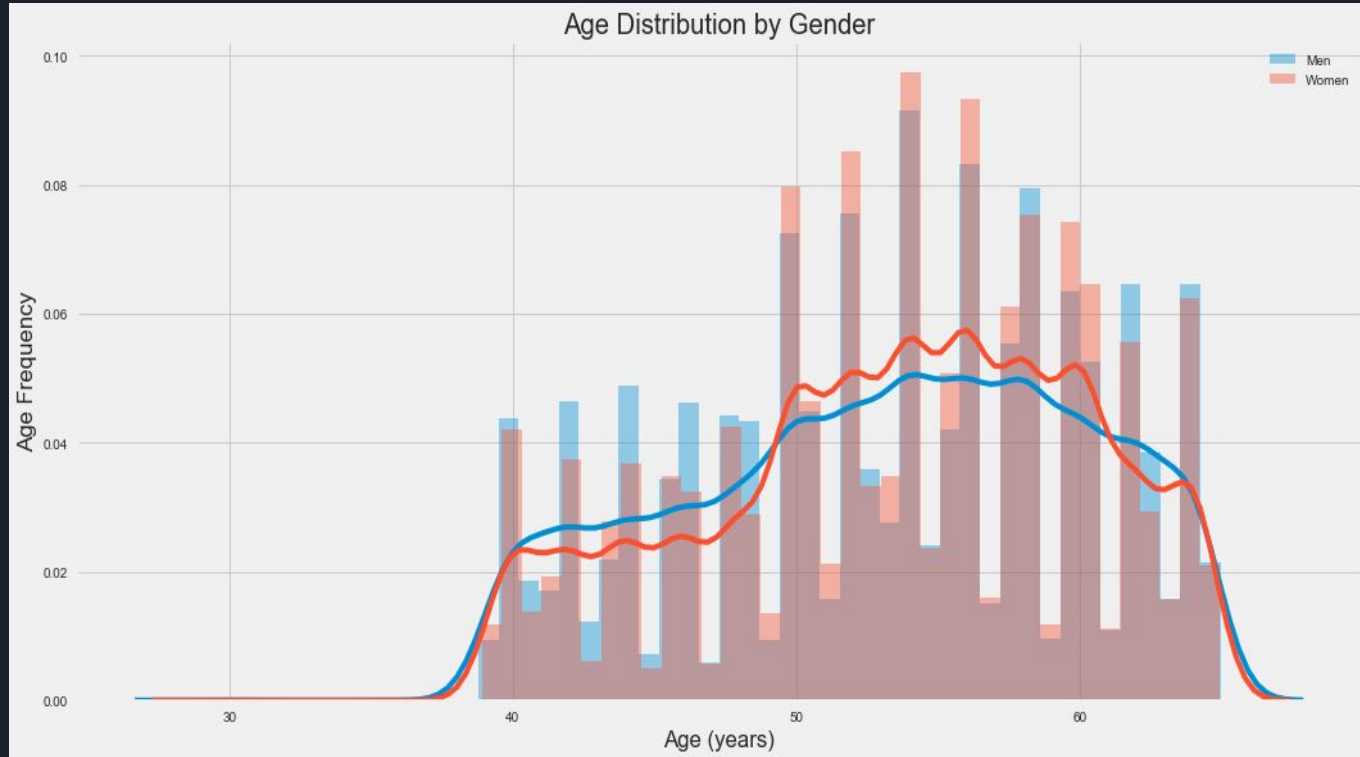

- Present Dataset
- Risk Factor Relationships
- Model Development

Project Objectives

- Cardiovascular disease classification model (CD)
- Explore risk factor contributions to CD
- Explore risk factor interactions

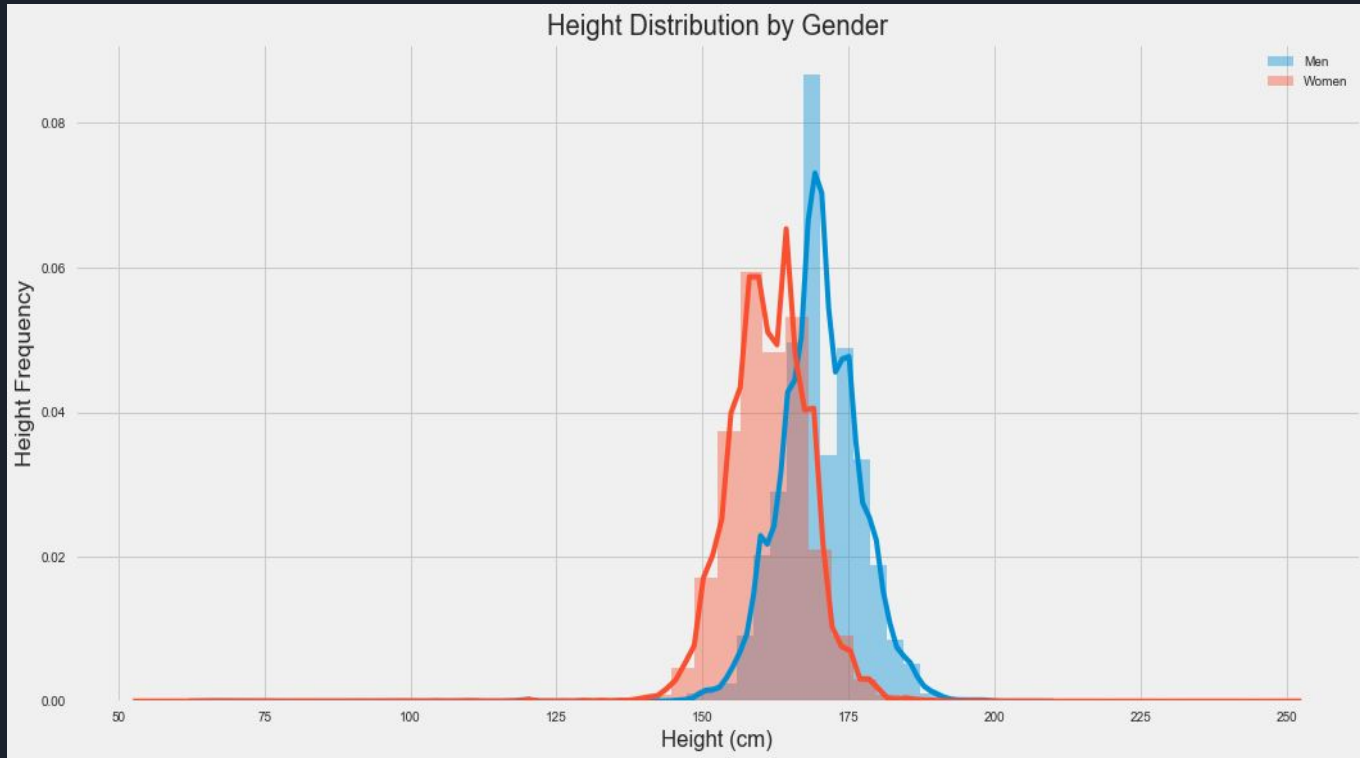

Population Trends

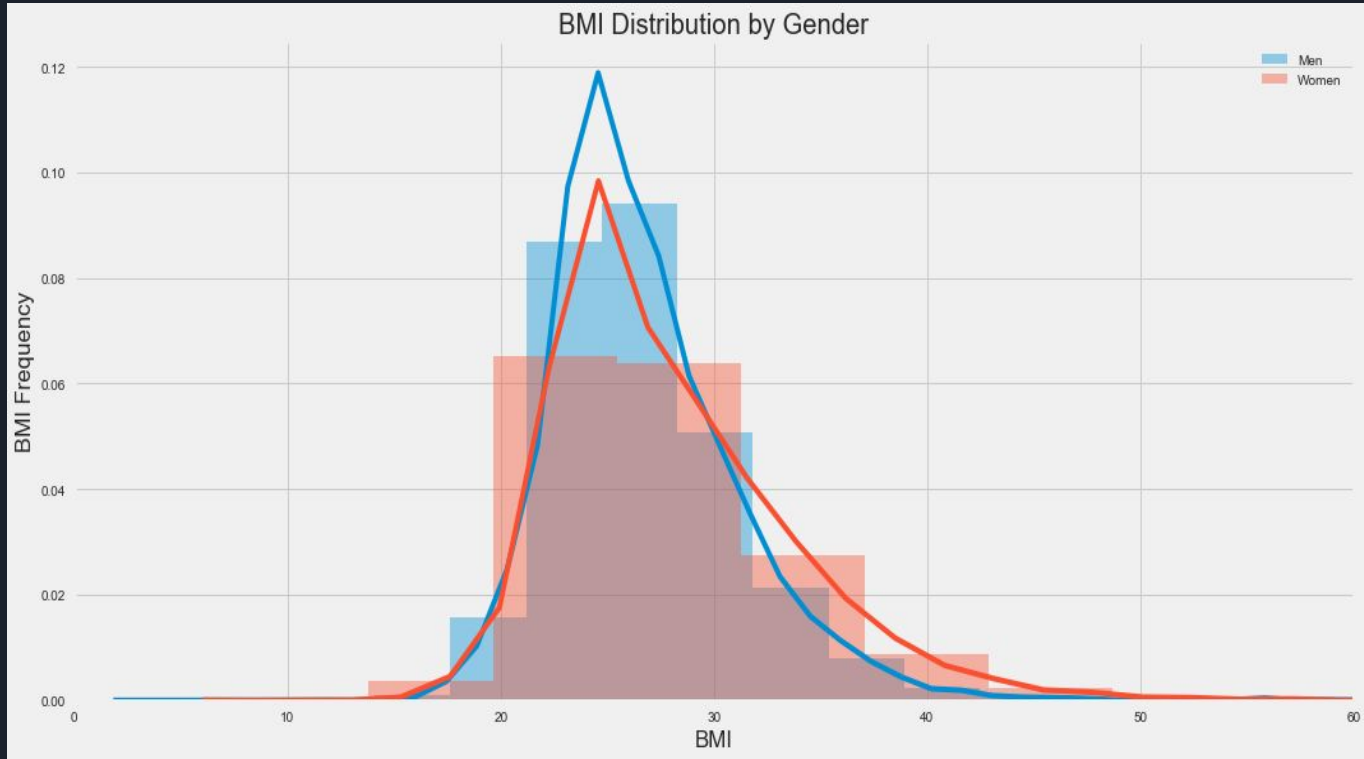

Population Trends

Population Trends

Population Trends

Risk Factor Interactions

- ✓ cholesterol and physical activity vs CD¹
 - substance use and physical activity²
- ✓ significant relationship

CD Factors

Height/Weight³:

| | |
|---------|-------------------|
| age | cholesterol |
| gender* | glucose |
| height | smoking |
| weight | alcohol |
| ap_hi | physical activity |
| ap_lo | |

BMI⁴:

| | |
|-------------------|-------------|
| age | cholesterol |
| gender | ap_hi |
| ap_lo | glucose |
| smoking | alcohol |
| physical activity | BMI |

* non-significant factor

Classification

Height/Weight:

Accuracy: 74.49%⁵

Improvement: 23.78%

BMI:

Accuracy: 73.95%⁶

Improvement: 23.57%

Recommendations:

- BMI model*
- diagnostic training tool
- behavioral therapy

Where To Improve?

- Demographic info
- More specific data collection:
 - glucose (mM/L)
 - cholesterol (mg/dL)
 - alcohol (number of drinks a day)
 - smoking (number of packs per day)
 - physical activity (number of days per week)
 - substance use
- Trunk-fat measurements

Thank you!

Appendix

1. cholesterol * physical activity vs CD

Logit Regression Results

| | | | | | | |
|--------------------|------------------|-------------------|---------|-------|--------|--------|
| Dep. Variable: | cardio | No. Observations: | 70000 | | | |
